Cold-Related Hazards

Recorded Date: January 31, 2024

Time: 9:00-10:00 AM (PST)

Speaker: Shiron Vick

2023 had record breaking heat, and 2024 has started off with record breaking cold snaps. In fact, there were over 500 reported cases of hypothermia and frostbite from spectators of the Kansas City/Miami football game on January 13th. The temperature for the wild-card playoff game was minus-4 degrees Fahrenheit (minus-20 Celsius), and wind gusts up to 27 mph made for a wind chill of minus-27 degrees; making it the 4th coldest game in NFL history.

Imagine what that was like for the players. Imagine what it was like for the lineman. Now imagine what it was like for the poor kid working the concession stand.

Working in cold weather presents several occupational health and safety (OHS) risks. It’s important for employers and employees to be aware of these risks and take appropriate precautions to avoid:

- Which employment section is affected by cold hazards?
- What are the risk factors?
- How can the workforce mitigate cold stress?
- How do you identify the different forms of cold stress?

Attend SafetyNow’s free safety training webinar series January 31st at 9AM Pacific and learn what you can do to keep your employees safe, warm and productive while working in cold hazards.
