Respiratory Protection: The Facts

Sometimes it is difficult to respect a hazard you can???t see or one that may take years to affect you. Respirators can provide protection, but only if they are worn and used properly. Respiratory Protection creates an awareness and respect for the hazards by demonstrating with highly effective graphics how the respiratory system works and the effects of different airborne hazards. The program covers proper use, care and maintenance of air-purifying respirators and the importance of proper selection and fit. Respiratory Protection will educate and motivate your worker on when and how to properly use their air-purifying respirator.
