CDC Vitalsigns Trucker Safety

Facts and figures on crashes involving large trucks and the impact of not wearing a seat belt as well as solutions to mitigating the problem.

Using a seat belt matters.

Trucker safety requires an alert, buckled-up, experienced driver, with a reliable vehicle and strong employer safety programs. About 2.6 million workers drive trucks that weigh over 10,000 pounds (large trucks). About 65% of on-the-job deaths of US truck drivers in 2012 were the result of a motor vehicle crash. More than 1 in 3 truck drivers have had a serious truck crash during their career, and 1 in 8 has had 2 or more. Buckling up is both effective and required by federal regulations. But 1 in 6 drivers of large trucks don’t use their seat belts (2013). More than 1 in 3 truck drivers who died in crashes in 2012 were not wearing seat belts. Buckling up could have prevented up to 40% of these deaths.

Employers can help truck drivers stay safe by:
