

Chemical Manufacturing Training Plan

The chemical manufacturing industry is one of the most safety sensitive industries and enjoys an incident rate lower than the American average.

Having a training system in place for new and current employees is imperative to building a safety culture in Chemical Manufacturing. The benefit for the company includes reduced down-time resulting from accidents, reducing costs associated with Workers' Compensation, increased productivity from new hires, improved employee morale, and fewer reporting needed for OSHA.

It's really quite simple when you think about it- Safety programs allow for employees to stay at a workplace longer, feel secure at their job, and provide a level of insight that would otherwise be missed for management. Having a working safety plan in place could be a company's saving grace if the worst should happen.

Training topics also include those relevant to all industries that ensure safe work environments and healthy workers such as anti-harassment training and emergency response. These materials educate, inform and inspire better workplaces for all companies.

Download our OHS training calendar as selected by ASSE certified trainers. You can use this calendar to access both online and instructor-led safety training for each month.
