

Eye Injury – Restaurant Safety – Infographic

NFPA reminds you

Cooking is the leading cause of home fires and home fire injuries.

The **kitchen** is the leading area of origin for home fires.

Keep anything that can **catch fire**: oven mitts, wooden utensils, food packaging, towels or curtains, away from the stovetop.

Stay in the kitchen when frying, grilling, or broiling food. If you must leave, even for a second, turn the stove off.

Unattended cooking is the leading cause of home cooking fires.

If you have a **pan fire**, slide a lid on the pan and turn off the burner.

The **cooking range**, or cooktop, is involved in the majority of cooking fire incidents, deaths and injuries.

Have a child-free zone of at least **3-feet** around areas where hot food and drink is prepared or carried.

Thanksgiving is the peak day for home cooking fires, followed by Christmas Day, and Christmas Eve.
