

# Load Securement – Web Belts Infographic

## 6 Tips to Keep Cargo Securement Tie-Downs in Proper Working Condition

### 1 Cover Up the Corners

Use corner protectors to protect straps and cargo from damage.

### 2 Clean, Dry and Store

Rinse or soak in water. Do not use bleach, harsh chemicals or brushing. If straps cannot be cleaned with a mild detergent, they should be replaced.

### 3 Keep Equipment Dry

Keeping chains, webbing and hardware dry is important to maintaining their integrity.

### 4 Get the Tough Stuff

Use tie-downs with extra abrasion-resistant webbing to secure difficult loads.

### 5 Don't Let Them Drag

Keep your straps off the ground and secure excess webbing to prevent damage.

### 6 Know When to Replace

Examine tie-downs and other cargo control equipment before every load to make sure they are in safe working condition.
