

Spray Painting Safety Infographic

HOW TO USE A PAINT SPRAYER?

When you try this, you will never use your hands for painting again!

1. PUT YOUR PAINT IN CUP

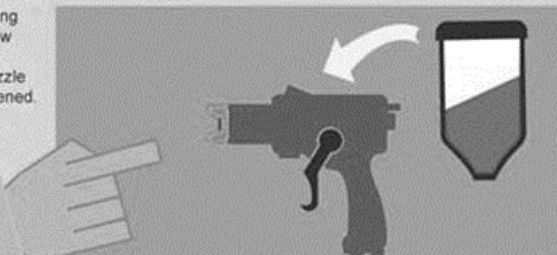

This might be the most important step. You should dilute your paint. Add water until it gets the right consistency

Stir it for some time.

You could filter your paint using a paint strainer. This step is optional.

2. CHECK YOUR SPRAYER

Before you start working you should check a few things. First of all you should check your nozzle to see if it is well tightened.

When you are putting in sprayer cup always check if it is securely tightened. It's always good to be careful.

Adjust the pressure if you need to. You'll want to keep the pressure as low as possible without it resulting in a weaker paint job. Unnecessarily high pressure wears out the sprayer faster.
