HOW TO REMOVE WEED EATER HEAD

6 Effective Steps

Step 1: Assess the type of your Accessory

At first, it is necessary to make sure the type of your weed eater's head that information helps you to do this process correctly. If your model is older, you can't get perhaps modern head fixtures.

Step 2: Ensure the power is turned off

Before commencing this process, it is nearly important to turn off the electric connection or engine connections. It is quite simple to do. Just off the power switch, your electric engine automatically powered off.

Step 3: Check your Device, Is It Clean

As a trimmer user, you might know, while you cut the grass by using this weed eater, this tool is affected by the dirt, cutting leaves, or mud. It's natural. Just because of the number of obstacles, your string trimmer can jam.

Step 4: Remove Spool or Nuts & Bolts

In this step, you have to become more careful. Check your device, it's head has a spool or nuts & bolt. Because many manufacturers made their weed eater heads using the spool around the lodging of the heads.

Step 5: Start Removing the Head

Now, you can skillfully get rid of the head because you might remove the spool or nuts from the weed eater. Wash your hands and hold on head carefully to pull it.

Step 6: Tighten the new head

Last but not least, you will have to fix a fresh head on the shaft. You can block the head's holes using a screwdriver. Check the external but, you have to use adjustable twisting for replacement.
