Working Against Violence Stats and Facts

FACTS

1. Workplace violence is the act of physical violence, intimidation, or any other form of harassment that takes place in a working environment. It can range from the most common types like verbal abuse or threats to the more severe ones like sexual harassment or physical assaults, and in extreme cases, homicide.
2. Shootings that result in homicides are by far the deadliest acts of violence that can occur in the workplace. The investigators have concluded that the most common problems active shooters face in their lives are issues with mental health and financial stability.
3. The majority of assaults happen in private companies. Men are twice as likely to be the victims of violent crime at work compared to women.
4. Workplace violence has become the second biggest cause of death in the business world, after traffic accidents.
5. When workplace violence statistics are taken into consideration, it is clear that health-care workers continue to be the most victimized individuals.
6. Workplace violence stats show an increase in the frequency and severity of violent events that happen in and around the workplace. Those violent acts have escalated to the point where mass shootings occur more often.
